

## B-STOP BARRIER ANTI-VEHICLE

B-STOP for road access security used by:

- the police forces
- the customs
- the military
- local government agency
- civil guard

Module characteristics:

- length : 105 cm
- width : 60 cm
- height : 75 cm
- weight : 21 kg
- impact resistance: 10T at 100Km/h

### B-STOP

- The B-Stop is the solution to stop a vehicle or a truck which intends to force an entry.

- It's modular design and it's easiness to assemble it to the dimension required by the road or the place access.

- Effective on all types of road coating. The advanced design for effort transmission to the ground enables the B-STOP to resist cars, vans or trucks attacks, launched at high speed.

-The design allows a fast assemble on the spot and without a heavy training.

## B-STOP BARRIER ANTI-VEHICLE

The B-STOP being folded and being assembled on site requires only one short training. It can be transported assembled.

**Assembly < 7 min**

The equipment requires a minimum maintenance due to its resistant steel. Replacement of the sole damaged parts will be necessary after use

Easy to transport on the field

B-STOP is easily installed
